WORK EXPERIENCE

- **Full Stack Developer | Creative Tech** [Oct'24 - Present]
 - I am currently working as a Full Stack Developer with a strong focus on CRM-based projects. My expertise lies in building and maintaining backend systems using PHP and Laravel, while also developing responsive and user-friendly front-end interfaces with HTML, CSS, and WordPress. I have worked on multiple projects that required seamless CRM integration, ensuring smooth functionality and optimized workflows. Along with this, I specialize in creating end-to-end websites from scratch, managing both the front-end and backend development processes to deliver scalable and efficient solutions.
- **Full Stack Developer | Elexoft Technologies** [Mar'24-Sept'24]
 - I worked as a Full Stack Developer at Elexoft, where I gained hands-on experience in building dynamic and scalable web applications. On the front-end, I developed responsive and user-friendly interfaces using HTML, CSS, Tailwind CSS, JavaScript, and jQuery, while also leveraging Vue.js for interactive features. On the back-end, I worked extensively with the Laravel framework and managed databases using MySQL. I also integrated real-time features with WebSocket, customized libraries, and wrote clean, efficient code to deliver high-performance solutions tailored to client needs.

PROJECTS

- **Estate Mate Management System** [Aug'23-Jan'24]
 - Developed a digital management system for Estate Mate, a real estate organization, to automate and streamline employee operations. The system enabled employees to manage their individual inventory, store client information for future sales opportunities, and record day-to-day activities. It also included features for tracking expenses such as company-provided transport, meals, and reimbursements through receipts. Additionally, the platform calculated employee commissions on successful sales, providing a transparent and efficient performance tracking mechanism. Bootstrap-5/MySQL/Laravel environment
- **Attendance Management System** [March'24-Jun'24]
 - Designed and developed a web-based application enabling employees to securely log in, mark attendance (on-time or late), and apply for leave requests. The system featured an admin panel where managers could monitor attendance, approve or decline leave applications, and manage salary deductions based on attendance data. Integrated WebSockets to enable real-time communication and updates, while all actions were API-driven and handled via cURL responses to ensure automation and seamless data exchange. Bootstrap-5/MySQL/PHP environment
- **Aussie Ligts** [Feb'25-April'25]
 - Developed a WordPress WooCommerce store, adding category-based products with multiple variations, integrated Stripe payment gateway, and configured essential plugins including cart and checkout. Delivered a fully responsive and user-friendly eCommerce website tailored to client requirements.
- **Pacitti-jones CRM** [Oct'24-Present]
 - Built and customized a real estate CRM (SuiteCRM-based) integrated with WordPress to manage the full property life-cycle, from valuation to sale. Automated lead creation, viewing management, and email workflows using Logic Hooks, Entry Points, and APIs. Streamlined operations by syncing properties from platforms like Zoopla and Rightmove, reducing manual work and improving efficiency.

TECHNICAL SKILLS

- **Programming Languages:** PHP, Javascript (ES6+), C/C++
- **Frameworks:** Laravel, Vue.js, Bootstrap-5jQuery, Tailwind CSS
- **Libraries and Tools:** Git/GitHub, Figma, RESTful APIs
- **CRM Platforms:** SuiteCRM, SugarCRM, MintCRM
- **API Integration:** API Integration and Development

INTEREST

- I possess a solid foundation in adapting to various environments and seamlessly transitioning between programming languages. Embracing new languages and environments is not only a skill but a passion, reflecting my commitment to continuous learning and versatility in tackling diverse challenges.
